

COVID-19 Vaccines

A SHOT FOR A BETTER TOMORROW

When COVID-19 vaccines become available to you, it is important to know the basic facts outlined by the U.S. Centers for Disease Control and Prevention (CDC):

+ SAFETY

The U.S. vaccine safety system ensures that all vaccines are as safe as possible, meaning benefits of a vaccine greatly outweigh the potential harm of becoming infected with COVID-19. All COVID-19 vaccines made available to the public have been thoroughly tested and approved the U.S. Food and Drug Administration (FDA).

+ EFFECTIVENESS

A COVID-19 vaccination helps keep you from getting COVID-19. All COVID-19 vaccines currently available in the United States have been shown to be highly effective at preventing COVID-19.

+ PREVENTION

Even if you've received a vaccine, it's important to continue using all the preventive measures to help stop the spread of COVID-19: Cover your mouth and nose with a mask when around others, stay at least 6 feet away from others, avoid crowds and wash your hands often.
